

## TAB 1

To start the plugin, you need to connect to the database

The attributes of roads downloaded from osm will be changed automatically to match the database table

After completing work with new road segments, you need to select all the roads that you want to add to the database, select a processing operator and click OK. After that, all new roads will be cut by each other and added to the database.

The image shows a software window titled "Add new roads" with a close button (X) in the top right corner. The window has two tabs: "Tab 1" and "Tab 2", with "Tab 2" currently selected. Inside the window, there are three main sections:

- Connection to database:** A label followed by a blue "OK" button.
- Download osm:** A label followed by a grey "OK" button.
- Оператор:** A dropdown menu showing "angle8" with a downward arrow.

At the bottom of the window, there are two buttons: "OK" and "Отмена" (Cancel).

## TAB 2

In this window, the user can find the accordance of road names and their numbers in the database to fill in the attribute table

 Add new roads
